DASHBOARD SCREENSHOTS –

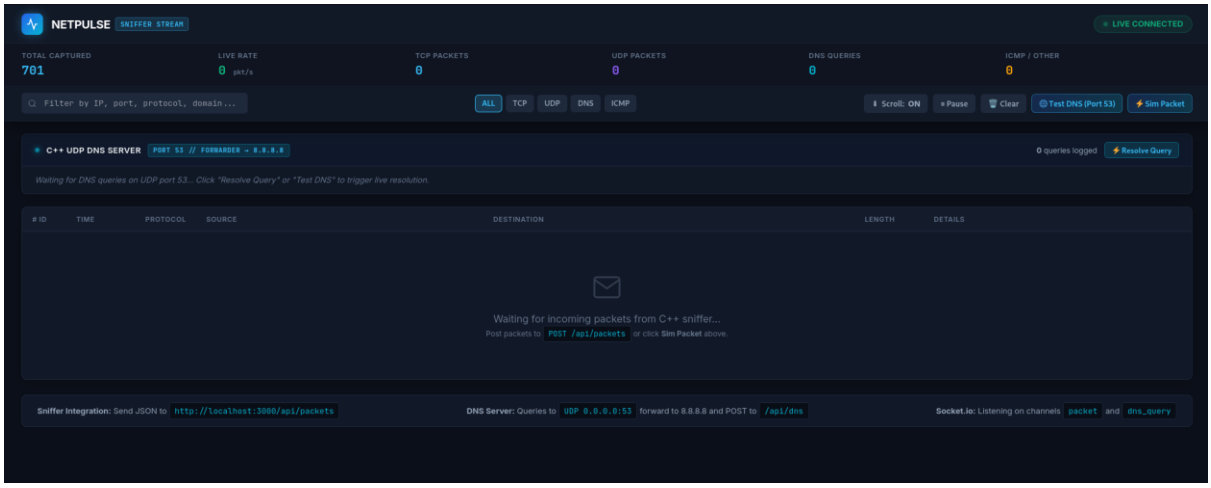

Figure 1: Dashboard after Clear: empty packet table ("Waiting for incoming packets from C++ sniffer…"), protocol counters at 0 and the DNS server panel showing 0 queries logged.

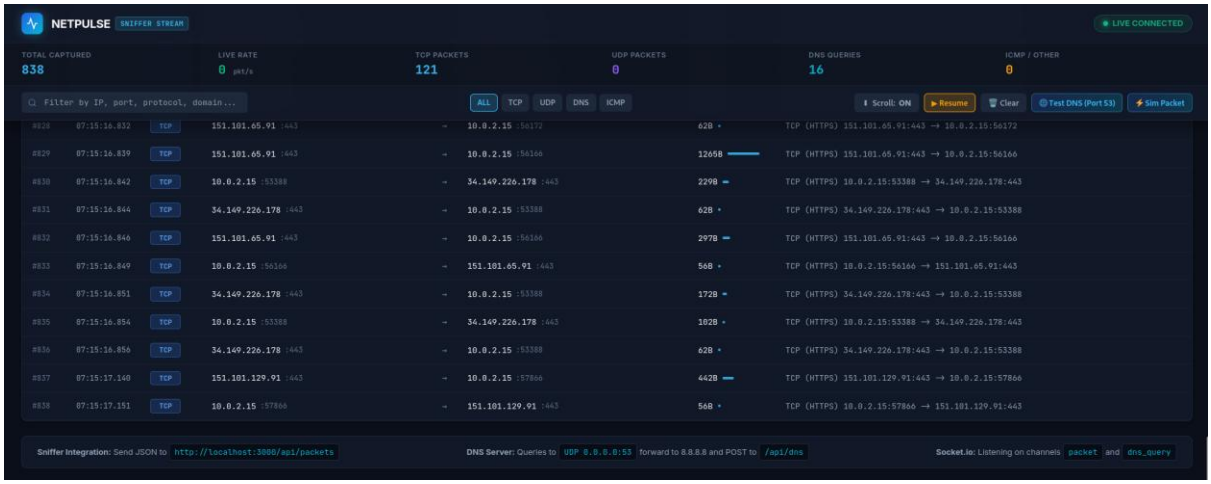

Figure 2: Live HTTPS (TCP port 443) traffic between the VM (10.0.2.15) and external servers, rows #828–#838; 838 packets captured in total, 121 counted as TCP, display paused (Resume shown).

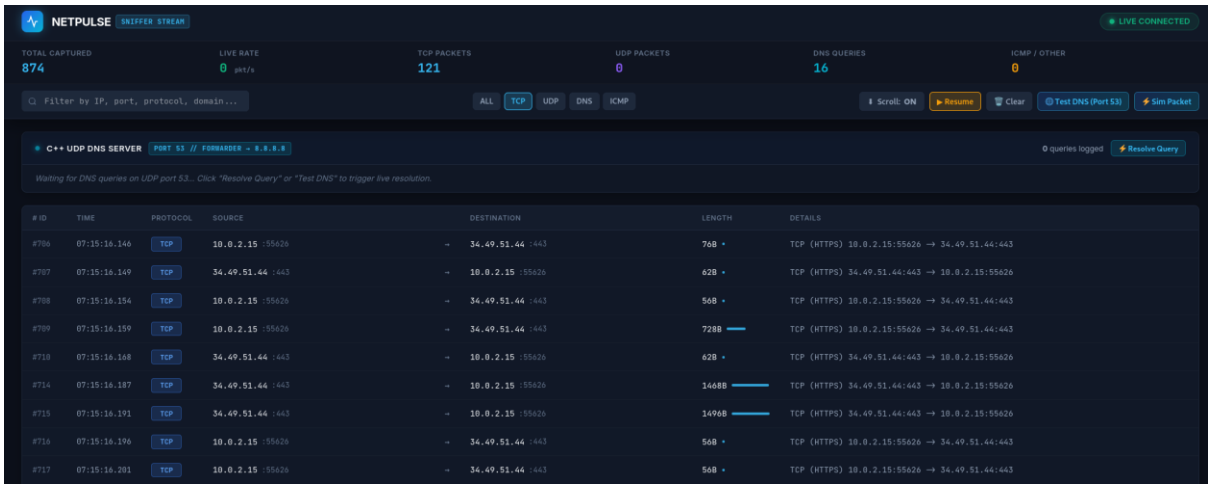

Figure 3: TCP filter active: only TCP (HTTPS) packets between the VM (10.0.2.15) and 34.49.51.44 are listed (#706–#717); the DNS server panel shows 0 queries logged.

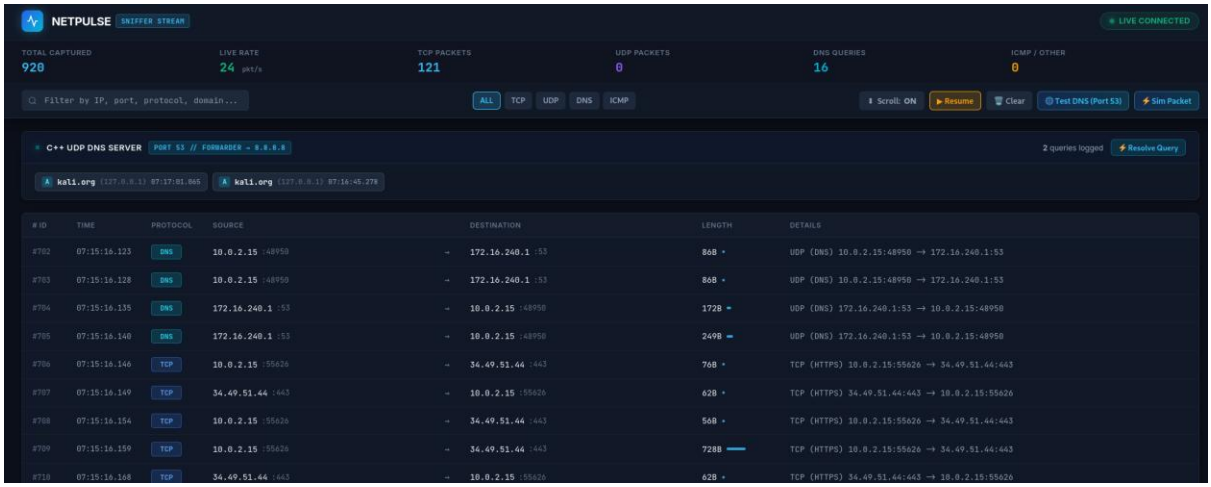

Figure 4: DNS monitor panel with two kali.org queries logged (client 127.0.0.1); below, DNS rows #702–#705: two queries from the VM to 172.16.240.1:53 and two replies, then TCP (HTTPS) rows.
